

Colin Lennox

Colin Lennox is the CEO, Inventor, and ecologist for EcolIslands LLC (BioMining Products) of Altoona PA. Colin went to Penn State Altoona for undergrads in English and Environmental Studies. Graduating in 2009, he started EcolIslands two weeks later as a landscaping and BioHaven Floating Island independent distributor before transitioning to mine drainage remediation in 2012.

Since then, BioMining Products have designed, built, installed, tested and retrofitted 30+ generations of MRU (metal removal unit). These experiences have culminated in the MRU Mk3, Mk4, and Mk5 reactors for a range of AMD, closed loop agriculture, municipal waste, flue gas desulphurization, and gas conditioning, with the eventual aim of printing bioreactors on Mars for human habitation.
